NOTES:
 Observers in the field during daylight are counted separately from nocturnal birders and those observing at feeders.

When reporting the minimum and maximum number of groups, include only groups in the field during daylight hours.

Minimum/Maximum Number of Groups: To determine the number of daylight groups, use the number of groups that you began the day with as your basic number. If groups further split up during the day, the maximum number in the field at any given time of the day should be reported, and the basic number becomes the minimum.
 Example: Area 1 at CBC Frozentoos, Alaska starts the day with 3 groups. Later, two of these split into two groups each. Record this as Minimum Number of Groups (daylight) = 3 and Maximum Number of Groups (daylight) = 5.
 Area 1 at CBC Frozentoos, AK also had a group of counters out owling from 4:45 a.m. to 6 a.m., but this groups is not included in the Minimum/Maximum Number of Groups.

Groups hours and distance (By Foot, By Car, and By Other Transportation) are reported excluding feeder hours and nocturnal birding hours and distance. Please round all hours to the nearest quarter-hour, and all distances to the nearest quarter-mile.
